Abstract (en)

[origin: WO2006051560A1] A paint or varnish feeder (2) for a roller-painting device (1), which comprises at least one hollow manifold (7) to deliver and to distribute the paint or the varnish to the roller (5) of the painting device (1), is described. The feeder (2) has, on a flat face (14) destined to come into contact with the roller (5), a hollow surface (12), shaped like an arc of a circle, along the longitudinal axis of which there is at least a groove (13) directly connected to the at least one manifold (7). The hollow surface (12) advantageously has a radius no smaller than that of the largest sized roller (5) with which the feeder (2) is destined to come into contact. The is further described a painting device (1) comprising said feeder (2).
