Abstract (en)

[origin: WO2006045611A1] The invention relates to an electric tool and a module (1) for an electric tool, in particular an electric hand tool, such as a drill hammer with a chisel function, equipped with a module of this type. The module is configured as a synchronisation and switching unit that can be pre-assembled and is used for a rotary switch (12) that activates different operating modes. Said module comprises a locking element (3) that engages in a non-positive fit in a part that rotates in a fixed manner with a tool spindle (29), in addition to at least one switching plate (5, 6) with a guide curve (14, 15) for converting a rotational displacement of the rotary switch (12) into an axial displacement for activating different operating modes. The invention permits a simplified assembly of the electric tool.
