Abstract (en)
[origin: WO2006056190A1] The invention relates to a method for producing a heat exchanger (10) for an air heating device (12) which is integrated into a housing which guides air. Said heat exchanger comprises a heat exchanger body (14) which has a longitudinal axis. According to the invention, the heat exchanger body (14) is produced, at least partially, in a die-casting method which uses two cores. The cores are withdrawn counter to the directions of demoulding (40, 42) which extend along the longitudinal axis.
