Abstract (en)

[origin: WO2006026702A2] Provided herein are methods and systems relating to a semantic identifier that may allow for the unique identification of an item based on its relationship with other items without the need to store additional data; a translation engine that may translate data, metadata, semantic identifiers and other items from one format, language and/or data model to another; and a level of abstraction property of a hub or database that may allow for the differentiation of multiple instances or forms of an item.
