Abstract (en)

[origin: WO2006056677A1] The invention relates to a display device (1) which enables a poster banner (3) to scroll along the length of a support and which comprises two motorised lateral winding shafts. The invention is characterised in that each winding shaft is equipped with fixing means which are intended to be engaged with complementary fixing means in the form of a corresponding foil that is attached to one end of the poster banner. The invention is also characterised in that the device is equipped with guide means which facilitate the scrolling of the poster banner.
