Abstract (en)  
The invention concerns a protection (4) for cycling pants comprising both a first deformable solid material (13), selected from the group comprised of foam and elastomers and a second flowable material (14), selected from the group comprised of a gas, a liquid and a gel. A protection is also described wherein, at least in a region thereof, the thickness of the protection comprises a first flowable material housed in a first chamber made of an impermeable yielding material and a second yielding flowable material housed in a second chamber made of an impermeable yielding material. In case of puncture of the protection and leakage of the flowable material (14), the protection preserves a notable efficiency due to the presence of the deformable solid material (13) or of the flowable material present in the other chamber.
