Abstract (en)

[origin: EP1815986A2] The machine has a printing device (16) including a color supply device with a set of color zones that are separately adjusted. An adjusting device (38) actuates the supply device in a position adjacent to the printing device along a web path (14) such that a machine operator observes a print web (12) printed by the printing device in the position during an operation of printing. Components (42, 44) of the printing device are detachably connected by interfaces (46) such that the components represent the device (16), an offset printing device (18) and a flexo-printing device (20).
