Abstract (en)

[origin: EP1816009A1] The mechanism has curved arbors (3a, 3b) arranged in movable manner and displaced from an opened position to a closed position. End sections of the curved arbors are arranged at a distance from end sections of the immovable arbors (2a, 2b) in the opened position. The end sections of the curved arbors lie at the end sections of the immovable arbors in the closed position. The curved arbors are pre-stressed in a direction of the opened position. One of the curved arbors is arranged at a distance from the immovable arbors broader than the other curved arbors in the opened position.
