Abstract (en)
[origin: EP1816422A2] The device has a lighting subunit which has a base (7) carrying a switch, and a light that is switched by the switch. A plunger (27) penetrates an opening (26) of the base and is adjustable between an extended position and an inserted position for the actuation of the switch. The plunger is connected with a cap (5), in which a section (14) of the base is engaged, and the opening is formed at the engaged section.
