Abstract (en)  
[origin: EP1816656A2] The cable (10) has three identical insulated phase conductors (12, 14, 16) formed of a metallic wire, and a ribbon-shaped screen (28) arranged around the phase conductors and a neutral conductor (24), where the screen is connected to a reference potential. Parts (30) of the neutral conductor and the screen are provided in contact with each other, where the parts are constituted of same electrically conductive material e.g. zinc. The neutral conductor and the screen are covered with coatings e.g. zinc layers (26, 34).
