Abstract (en)

[origin: EP1816893A1] The present invention provides a hearing device comprising a first component (10) with a housing (11) with one electronic module, to be carried outside of or at the human body and a second component (20) to be inserted either partially or fully into an ear canal of a human body. A tube (30) connect the two components. The tube has two fasteners. Said first fastener (31) connects said second component (20) with said connecting means. The second component comprises a receiving housing or compartment, to contain at least a part of a receiver (23) to be placed within said second component (20).
