Abstract (en)

[origin: EP1816901A2] Device has an electrical resistance-heating wire (20) arranged in an inner side of a casing tube (10) and embedded into an electrical-insulating, heat-conducting insulation mass (40) in the tube. A connection component (30) is provided for connection of the heating wire with an electrical energy source arranged at an outer side of the tube. A closing pellet (38) is provided with a filling slot at its outer side for filling of the insulation mass in the inner side of the tube, where the slot extends over the entire axial length of the pellet.
