Abstract (en)

[origin: WO2006021466A1] The invention relates to a manual machine tool handle device comprising a vibration-shielding unit (10) and a guiding mechanism (12) for directing a movement (26) of a handle element (16) that is movably mounted relative to a manual machine tool body (14). According to the invention, said movement (26) is at least substantially linear.
