Abstract (en)
[origin: WO2006039915A1] Lift installations (1) are required for short ski or toboggan pistes, hence in particular, for indoor installations, which are simple in construction and maintenance, but which can be used without difficulty by the user. Draglifts which are suitable for this scale of ski or toboggan piste on economic grounds, frequently present problems for users as the transport hooks are continuously in operation. According to the invention, a track system (2), arranged in a loop, is provided, on which sleds are drawn upwards on a transport run (18) and returned down empty on a return run (21). The sleds (9) are held in the bottom or top station (3, 4) such that getting in and out can be carried out without problem. On embodying the sleds (9), whereby the people sit transverse to the direction of travel on folding seats, the skis do not need to be taken off.
