Abstract (en)

[origin: WO2006051164A1] The invention relates to a tiltable unloading or loading table for a sheet glass laminating line. The table comprises a roll conveyor (1) for carrying laminated or to-be-laminated glass sheets co-directionally with the laminating line, a pivot axle (2a, 2b) and a power unit (3) for tilting the conveyor (1) about the pivot axle (2a, 2b) from a horizontal plane to what is almost a vertical plane. The table further comprises a roller assembly (4), having its conveying plane raisable above a conveying plane constituted by the rolls (1) for manipulating laminated glass sheets in selective directions. On each side of its vertical middle plane (A) the table is provided with a pivot axle (2a, 2b) transverse to the rolls (1). A combination conveyor (12) constituted by the roll conveyor (1) and the roller assembly (4) is selectively tiltable about either pivot axle (2a, 2b) from a horizontal plane to what is almost a vertical plane.
