Abstract (en)

[origin: WO2006030162A1] The invention concerns a method for treating a fluid and in particular at least for carbonate removal from water in a reactor (1), said reactor (1) comprising at least one anode (A) capable of being connected to a positive terminal of a current generator (2) and at least one cathode (C) capable of being connected to a negative terminal of said current generator (2), characterized in that said fluid is subjected to intense mixing inside said reactor (1).
