Abstract (en)
[origin: WO2006048280A1] Multifunctional surface-modified cellulose-containing fibers, especially for producing paper and cardboard packagings, are provided with numerous specific advantages regarding production and the product. The invention particularly relates to cellulose compounds and microcomposites in which solid materials, liquids, and dispersed or amorphous additives, for example, are coated onto the surface of the cellulose, and methods for the production of said compounds.
