Abstract (en)

[origin: WO2006042593A1] The invention relates to a device for testing a dataset (112), said data set (112) having a plurality of subsets and one partial test value (114) per subset. The inventive device comprises a facility (102) for establishing a test value and a comparative facility (103). The facility (102) for establishing a test value is adapted to establish, based on the partial test values (114) of the subsets, a common test value (116). The comparative facility (103) is adapted to compare the common test value (116) with a comparative value (118) provided to the comparative facility (103).
