Abstract (en)

[origin: WO2006040316A1] The invention relates to a method for determining information on a heat-exposed device (1) which makes it possible to reliably and simply determine information of the device (1) deterioration. For this purpose, the device temperature is detected, at least one meter (5, 10) is incriminated according to an attainable temperature or temperature change. Information on the device (1) deterioration is determined according to the meter state.
