Abstract (en)
[origin: WO2006045137A1] A dealer determined communal gaming system and method for operating the communal game is provided. The system includes a plurality of electronic player terminals and a game outcome determining device (10). Each terminal allows a respective player to place wagers on possible game outcomes. One possible game outcome is a bonus feature (14). The game has two modes: a primary mode, in which the game outcome is determined by using the game outcome determining device (10); and a bonus mode. The bonus mode is instigated only when the game outcome of the primary mode is the bonus feature (14) and at least one winning player placed a wager on this bonus feature (14) outcome. In the bonus mode, the winning player is allowed to select a bonus option at their terminal.
