Abstract (en)

[origin: EP1817981A1] The device has a guide rail (6) bent in a cross section and comprising flat material sections at which a separate structural unit is interchangeably attached. The structural unit is attached to fixing sides (6a, 6b) of the flat material sections which are angular to each other. A guide body (12a) moves along opposite sides of the unit, where the opposite sides are at a distance from each other. Through holes (36, 39, 40) are provided in the respective flat material section, and attachment units (28, 29, 38) of the unit are engaged with the holes.
