Abstract (en)

[origin: EP1818296A2] Lying in a winding bed (4) between two king rolls (2,3), a wound roll (7) fits in bearings on a guide head (8) at a front side. Corresponding to a winding tube's increase in diameter during the operation of a roller winding device, guide heads each fit so as to be moved in a vertical direction by a guide slider (11) moved in a linear direction (9).
