Abstract (en)
[origin: EP1818433A1] A yarn processing nozzle which reduces deposits on the nozzle to provide high productivity is disclosed. The nozzle is provided with a core having an inlet end, an outlet end, a yarn channel penetrating the core from the inlet end to the outlet end, which is capable of having the yarns running therein, and an injection duct opening into the yarn channel for supplying the jet around the yarns; a coating consisting essentially of an inorganic solid matter of carbon or carbon compounds, the coating being coated on the inlet end, the outlet end, and an internal surface of the yarn channel of the core; and a nozzle housing air-tightly supporting the core.
