Abstract (en)

[origin: EP1818485A1] The device has a forend (1) of thermally conducting material. The forend cooperates with a U-shaped sheath (2) of thermally insulating material for avoiding formation of a thermal bridge between interior and exterior of the door, window or potio window, where the sheath has a passage for fixation screw of the forend. The forend has an outer profile (3) and an inner profile (4), which are connected by a spacer (5) of thermally insulating material.
