Abstract (en)

[origin: EP1818599A2] The headlight (10) has a light module (20) with a primary lens (50) arranged downstream to a luminescence diode, and a secondary lens (90) arranged downstream to the primary lens. Each of the lenses has two lens segments (61, 71, 81, 101) arranged one above the other, where each segment of the primary lens is attached to each segment of the secondary lens. The lens segments have light inlet surfaces whose edges induce edges of objects in the segments of the primary lens, and the secondary lens projects and displays the objects in a vertical direction.
