Abstract (en)
The marker (10) for one or more elongate objects, comprises a film (12) in the form of a roll (13) having a winding axis (26) and an outer diameter and at least one overlapping winding layer, the film (12) comprising (i) an inner end section (14) having a free end arranged within the roll (13) and (ii) an outer end section (16) having a free end arranged at an outer side of the roll (13). The roll (13) comprises two axial ends (32,34) defined by edges of the film (12) extending between its inner and outer end sections (14,16). When the film (12) is unwound, the extension of at least a portion (42) of at least one of the edges of the film (12) forming at least one of the axial ends (32,34) of the roll (13) deviates from an extension perpendicular to the winding axis (26) of the roll (13).
