Abstract (en)

An apparatus for controlled supply of lighting systems powered by an alternating voltage (V AC) source, with interposition of protection means and supplying a plurality of electric loads (L₁, L₂, ..., L_j, ..., L_n), includes a device for converting the alternating voltage (V AC) into a direct voltage (V DC), made available at the outlet terminals. A plurality of modulating units (U₁, U₂, ..., U_j, ..., U_n) are connected respectively to the plurality of electric loads (L₁, L₂, ..., L_j, ..., L_n) and supplied by the direct voltage (V DC). Each unit (U_j) includes at least one solid state electronic switch (E₁, E₂, ..., E_j, E_{J A}, E_{J B}, E_{J C}, E_{J D}), which is enabled/disabled to allow circulation of an electrical current (I_j) through the corresponding load (L_j). A central unit is provided for enabling/disabling the solid state electronic switches (E₁, E₂, ..., E_j, E_{J A}, E_{J B}, E_{J C}, E_{J D}, ..., E_n) by respective control signals (S₁, S₂, ..., S_j, S_{J A}, S_{J B}, S_{J C}, S_{J D}, ..., S_n), according to a prefixed modulation technique.
