Abstract (en)

[origin: WO2006060934A1] Disclosed is a textile device for electrophysiological measurements or electrostimulation, comprising a textile layer (4) which can be biased towards the body surface of an individual wearing said device. The side of the textile layer (4) that faces the body is provided with a group of electrodes which are designed to be in skin contact. Said group of electrodes encompasses at least one electrode (2) that has a minimum height of 1 mm and is embroidered onto the textile layer.
