Abstract (en)  
[origin: WO2006042768A1] The invention relates to a device comprising a centering element (10) and at least one form-fitting element (12) for fixing a tool (14) that can be placed axially on an oscillatingly driveable shaft (16) of a hand-held machine tool (28). The centering element (10) is provided in order to center the tool (14) in relation to the drive shaft (16), and the form-fitting element (12) is used to determine a rotational position of the tool (14) relative to the drive shaft (16). According to the invention, the form-fitting element (12) is disposed radially outside the centering element (10).
