Abstract (en)
[origin: US2007210198A1] A yarn delivering apparatus comprises a yarn delivering wheel having a drive, as well as a yarn storing device having a yarn laying device which is provided with its own yarn layer drive. A control device controls both drives, providing for a pure positive operation of the yarn delivering wheel on the one hand, and a yarn return delivery during shuttling of the knitting machine, on the other hand. Further, such a configuration improves the dynamics of the yarn delivering apparatus.
