Abstract (en)
[origin: WO2006060972A1] The invention relates to an electromechanical module (1) wherein the spatial position of a component (2) that can be displaced in relation to the module (1) can be determined by means of a sliding contact (31 or 32) provided on the mobile component. In addition, at least one contact field (4) which is static on the module (1) and corresponds to the sliding contact is provided, said contact field (4) being connected to a signal line (5) for the electrical interrogation of the spatial position of the component (2), the signal line (5) and the contact field (4) being embodied by a strip conductor film (6).
