Abstract (en)

[origin: WO2006032798A1] The invention relates to a low-temperature cooling system which is intended for at least one piece of equipment, such as piece of motor vehicle equipment, and which comprises at least first and second heat transfer fluid circulation loops. According to the invention, a low-temperature heat exchanger (60) and at least a first (104) and a second (106) equipment exchanger are mounted respectively to the each of the loops. A first flow (Q_{sub}
