Abstract (en)

[origin: WO2006056723A1] The invention relates to a method and system for controlling a motor vehicle comprising an actuator-operated clutch (E), which is equipped with a device (26) for automatically stopping and restarting the engine (10) in pre-determined conditions, in which the biting point of the actuator-operated clutch (E) is determined during the period of time preceding the stopping of the engine (10) of the vehicle which is controlled by said device (26).
