Abstract (en)
[origin: EP1820421A1] The carousel fitment includes two rectangular articulated corner units (4a,5a,6a,7a;4b,5b,6b,7b) connected through a single coupling rod (15) which is attached at each end to an articulated coupling joint (16a, 16b) so that the one guide cam (8a) on the pillar side follows the other guide cam (8b) and the one door panel (2a) follows the other door panel (2b) each with a slightly alternating asymmetry from the starting position into the swivel position. The two control arms making up the corner units are mounted in front of the pillar (1) seen from the door panels and the control path is circular with a radial outlet. Independent claim describes corner cabinet with carousel fitment.
