Abstract (en)

[origin: EP1820648A2] The system has multiple application rollers, provided to from a cylinder. An oscillating driving device for providing axial movement to the oscillating rollers (7c,7d). The oscillating drive is so formed that the phase position of the lifting movement of the oscillating roller (7c) is adjusted or changed against the lifting movement of the other oscillating roller (7d). The oscillating rollers are supported in the ink flow inking roller, which supply the ink from the ink supply area. An independent claim is included for method for the determination of an adjusting condition of an inking system.
