Abstract (en)

[origin: EP1820713A1] The system has bow (3) connected by driving carriage (4) rolling on longitudinal parallel guides permitting to slide the carriage, where bow maintains a sheeting in place. The carriage has a bearing roller on each guide, where guides are integrated to a platform (1). The rollers are moved on the guides by sliding the carriage for refolding and unfolding a cover on the platform. Three jacks are aligned on each guide to cover entire length of wagon.
