Abstract (en)
[origin: EP1821051A1] The invention is quick ice-making units (A, B) in a freezing compartment which use a cooling technique based on directing ambient air forcibly by a fan (15) - motor (16) mechanism located in a freezing compartment to the compartment of a cooling element (17) such as an evaporator, and cooling this air while passing over the cooling element (17) and re-transferring it into the freezing compartment (1) or the ice chamber (2, 12) from air blowers. These inventive units are described as quick ice-making unit (A) with thermoelectric cooler and quick ice-making unit (B) with cold air blower inlet. Both units (A, B) have the ability to be used together or separately in a freezing compartment.
