Abstract (en)
[origin: WO2006063687A1] The invention relates to a transmission rod (3) which is used to transfer drive forces, which can change directions, to a heald frame. According to the invention, two partial sections (3a, 3b), wherein one of them comprises a connection element (21), are provided. The connection element is provided with a finger element (2) in the longitudinal direction thereof, which is associated with a tooth-like, tensile receiving element of a connection element (23) of the other part section (3b).
