Abstract (en)

[origin: EP1672122A1] The process controls the path of a road treatment machine (2) moving on a ground surface (1) and the working height of a height-adjustable working part (4). It measures the spot of a positioning element (11), plots a travelling direction and determines the working height of the working part. The positioning element is placed horizontally to this part and the positioning height of the positioning element is converted into the working height of the working part using at least one value of a reference calculation.
