Abstract (en)
[origin: WO2006063544A1] The invention relates to a construction element (10) for vitrifying a building, which comprises at least one pane of glass (12) and a splitter protection element (30) which is connected to the pane of glass. According to the invention, the splitter protection element (30) comprises, in a peripheral edge area (14), at least one retaining element (18) for fixing to the building. The invention also relates to the use of a construction element (10) which comprises at least one pane of glass (12) and a splitter protection element (30) which is connected to the pane of glass. The splitter protection element comprises, in the peripheral edge area (14), at least one retaining element (18) which is used to vitrify a building.
