Abstract (en)

[origin: WO2006066815A1] The invention relates to a parking system for motor vehicles consisting of several platforms (1, 2) that are arranged one above the other. The platforms can be raised and lowered between a first lower position and a second upper position. The platform can thus be selectively connected to a common access (3). The platforms are preferably configured on an upright (4) and can be fixed in their respective positions on said upright by means of a support (6, 60, 61) or a stop (5, 50, 51).
