Abstract (en)
[origin: WO2006056429A1] The invention relates to a multi-shot hand firearm which is used to fire cartridges which can be triggered electrically. The arm comprises an electric circuit which is used to generate the trigger voltage, a breechblock (7) and a firing pin (47) which is received in the breechblock (7), whereby the tip of the trigger is arranged on the cartridge base of a loaded cartridge when the breechblock is closed (7). The arm comprises a pivotable contact lever (45), whereby the pivotable movement thereof is coupled to the movement of the breechblock (7) in order ensure that the arm functions in a safe manner, and is in electric contact with the firing pin (47) and with the electric circuit. The contact lever (45) is embodied in such a manner that it interrupts the electric contact between the electric circuit and the firing pin (47) when the breechblock is open (7).
