Abstract (en)

[origin: WO2006054016A1] The invention concerns a prepayment device for dispensing French fries ensuring that the pre-cooked and frozen French fries are discharged from storage means and a determined amount is weighed corresponding to one or more portions of French fries then received by receiving means which are moved between the weighing zone, the cooking zone, followed by conveyance of the discharged and transported cooked French fries to a container derived from the storage means of the device. The device comprises means for providing the means for receiving the French fries with a swinging movement enabling the French fries to be mixed and turned ensuring that they are homogeneously cooked. An additional feature of the device is that the means for discharging the cooked French fries consist of means for providing the receiving means with a tilting movement about an axis towards the means transporting the cooked French fries to the container.
