Abstract (en)

[origin: WO2006063928A1] The invention relates to a polyphase switching device (1) comprising several interrupter units. Said interrupter units are equipped with a first and a second terminal. The terminals lie on a respective main axis (5) and the main axes of the individual interrupter units are aligned in parallel. All distances between the main axes (5) are different. The invention thus provides a multi-functional polyphase switching device (1).
