Abstract (en)
[origin: WO2006063686A1] Disclosed is an insulating part for holding at least one inner conductor part (16) in a predetermined position in an HF plug-in connector. Said insulating part (100; 200; 300) comprises at least one axial bore (12) for accommodating the at least one inner conductor part (16) as well as a radial slot (14) for at least one axial bore (12). Said radial slot (14) extends along the entire axial length of the insulating part (100; 200; 300) in an axial direction while extending from the circumference of the insulating part (100; 200; 300) to the respective axial bore (12) in a radial direction. In the circumferential direction, at a junction of the radial slot (14) with the axial bore (12), the radial slot (14) is provided with a width that is smaller than a diameter of the axial bore (12).
