Abstract (en)

[origin: WO2006061304A1] The invention relates to a camera module (10) comprising a stray light screen (12) that is mounted upstream from a lens (52) of the camera module (10). Said stray light screen (12) rests against the interior face (16) of a pane (14). The inner side (28) of the stray light screen (12) is provided with a structure (34) that reduces incident stray light (32, 36). Said structure (34) that reduces incident stray light (32, 36) encompasses at least one secondary, ramp-shaped structure (56, 80, 86) which extends perpendicular to the optical axis (20) of the camera array (10).
