Abstract (en)

[origin: EP1825767A1] The body (60) has a trough shaped transport surface (601) that is utilized for tobacco flow. A suction device is provided on a lower side (603) facing the transport surface for a part of feed air of another tobacco flow. The suction device is divided into a set of chambers, and a control device is provided for controlling air sucked off by the suction device. The suction device is arranged in an end region of the body.
