Abstract (en)

[origin: EP1826002A2] The machine has a set of rollers (3, 7, 9) driven and speed controlled by a controller arrangement. The controller arrangement is arranged such that rotation speed desired value of the cooling roller (3) is provided in variable relation to rotation speed desired value of one of the driven rollers (7, 9). A measuring point (16) is assigned to the cooling roller. The measuring point of the cooling roller detects tension of a material web wound on the cooling roller. An independent claim is also included for a method for regulating web tension in a printing machine.
