Abstract (en)

[origin: EP1826004A2] A method for monitoring and identifying a print master fitted to a print roller has a transponder (18) fitted to the master and programmed with the master details, e.g. alignment. The transponder is read by a sensor (19) on the roller and the information is used to align the master. A data link (20) to a controller (21) Enables the operator to rapidly monitor the fitted masters in a printing press.
