Abstract (en)

[origin: EP1826137A1] This invention provides a package comprising a formed product, formed by heat welding a sheet-like planar polymeric film to form the film into a cylindrical form. The formed product is filled with a gel product and a viscous paste product as contents, which are very stable and are not separated from water, together with gas. In this package, upon opening, the gel product is easily discharged without adhering or sticking to a surface of contact with a polymeric film surface, and, further, the whole quantity of the paste product is discharged into the formed product without adhering and staying.
